

1. **Link** is used in place of **a** tag, but we should not use this tag because it reloads the whole page again and again, **NavLink** prevents this.
2. **Propdrilling** does not help much, we should use a global file to access the data instead of prop passing.

Context API exists only on react

Redux(stackathon library) helps in state management,means the data passing from here and there it manages it in a organized way.

in react - react-redux, Redux-toolkit(RTK)

cleanup,componentDidmount,ComponentwillUnmount...

lazy loading,suspense,custom hooks
